ASSEMBLY OF THE ATS COVER

The new **neoprene cover** for the **ATS** will shield it from potential abrasions and keep the safety strap secure, while also enhancing its aesthetic appeal.
To install it, we will need to follow the following steps

Step 1: Remove the carabiner.

Step 2: Slide the cover onto the ATS from top to bottom, ensuring that the safety strap (Dyneema) stays on top.

Step 3: Once the cover is in place, proceed to attach the carabiner by passing it through the fastening strap and the safety strap, making sure there are no twists.
